

Solar Tracking Unit x15K STU

Lat-Lon's Solar Tracking Unit brings you critical information about your rail, barge, intermodal, or trucking assets. This self-contained device uses patented solar-powered technology to self-charge, allowing sensors to report day or night and results in a longer life span

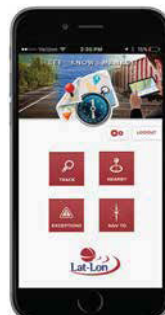

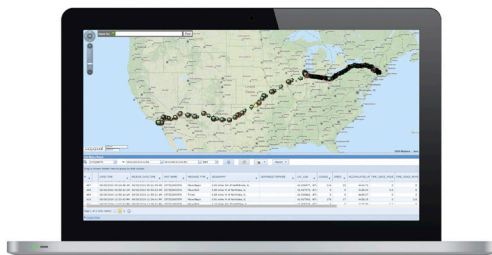

Solar Advantage

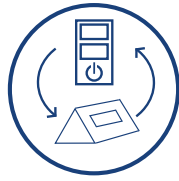

- Eliminate battery replacement and related downtime expenses with self-charging, dual integrated panels that use sunlight to replenish power, year after year.
- More power = Frequent and reliable data

Real Time Alerts

- Easily adjust alerts and thresholds over the air
- Get alerts via email, text, or simply login on to any device with unlimited access to the Lat-Lon web portal or mobile apps
- Easily export data or integrate with existing Fleet Management Software
- User accounts allow customers to track assets on their own, giving customers peace of mind through visibility

Adaptive Device Configuration

- Adjust reporting configurations to optimize data to best fit your needs
- Automatically update units based on custom parameters, such as velocity, impacts, location, or other sensor data
- Example: Disable temperature alarms when an asset enters a certain location.

Customizable Sensors

- More than GPS: Customize sensors to your unique business needs
- Impact: Monitor for damage with our 3-axis accelerometer. Complete with filtered and unfiltered values, delta velocity, impact and deceleration charts.
- Wired and wireless sensor options
- Additional Sensors Available:
 - Door/Hatch Open or Closed
 - Pressure
 - Temperature
